Belected Poeten.

A LADY TYPE SETTER.

BY Y. D. CURTIE. Ene her slanding at the "case," Looking sweet and bland; Gracefully she moves her head, Rapidly goes her hand, Deking up the alender types, Putting them in the stick-Hear their rattle against the steel ; Click-click-click!

When the tottering 'ine is "fact," She "spaces" it even and alce; Nimbly the "lead" goes into its place, The "rule" is drawn in a trice; Then her eyes the copy devouts, And firm she holds her "stick"-From box to box her fregers fly,

When "distribution" time has come, She handles will the "matter ;" The types fall in the empty "case," Scatter-scatter-scatter 1 And stendily and dreamily She flings the letter round, With visions dancing thro' her brain To the music of the sound

Pick-pick-pick!

And thus is growing in her mind Sweet fruit for coming years, That she in bitterness so long Has watered with her tears; For thought is bursting into bloom Beneath the rays of Right, And luve is waking from the civil Of long and dreary night

The Wind has Heaved the Billow's Broast.

Lines suggested by parting with a beloves friend, written on board the Arctic. The wind has heaved the hillow's breast; The ship is rocking on the sea ; And time and tide, that never rest, Have brought the destined hour to me.

I leave the, Mary ! Oh, how dear ---None but thyself can ever know, Hide from my heart that scalding tear, Unfold thy arms, and let me go.

Oft on the dark and raging sea, Or when in distant lands I rosm; My aching hear, shall think of thee, Think of our dear and cherished home.

Oceans may call between a last sever Can read our meters contraport, Monhitaint 2 ay 1700 | had cannot sever The hora (has bride me, hours to brack

or Parelle and an example from an author, And lines and limits good their round ; But how brounquerer of space, And Heer's life, that knows on the

FLOWERS.

A great many pretty things have been said of pretty women and flowers, but the real uses of both are often overlooked .shine of the world, and one of the strongest arguments to prove that God is wise good, is the fact that He neither forgot the one or the other in the multiform work of ereation. How the flowers spangle over and beautify the bard, rough earth! Their meck and quiet beauty steals into all hearts bood, "the nations shall learn war no more." young and old. They are welcome everywhere. Go into the country and bring home roses, it popping as luck will fet you, and children in the street will follow you the nicely dressed child, and the ragged and dirty fased little one, whose mother has to wash for others, and saying in words, or long looks, "please give me a flower."

Flowers never disappoint us, as the women (beaven bless them!) do sometimes, but they would not if we did not expect too much of them. Of the flowers we ask only beauty and fragrance. We do not look to them for a future. Enough that they fill the present with an odorous

we are certain fair hands placed it there, and yet he was where the sea was not them. It these combats the strongest kills Then when we see the plants in the win- 2,600 fathous deep. dow of a house, be it ever so humble, we? would sould without the flowers.

We bespeak flowers. We want our ways present the some face. pathway literally strewed with them .-

Steamships and Locomotives,

These two great levers of progress have effected greater revolutions in the regions of go-aheadativeness within the past half century, than all the powers could have brought about in a thousand years. During the post fifty years, steam engines and dirty firemen have almost annihilated time

and space. Now a man of business takes his breakfast in Boston and an early tea in Philadelphia, having in ten hours accomplished what, in the good old stoging times, would have occupied ten days. He pursues his journey, and, with the speed almost of lightning, is borne far beyond what then were the limits of civilized habitation, over what was wilderness, but now is "building and blossomic g as the rose" beneath the hand of agriculturists, and through towns villages and proud cities-reared where then the Indian built his wigwam, and the beasts of the forests roomed in undisturbed freedom. Floating palaces bear him along our noble rivers, or across the broad Atlantic, and the mighty power of steam has brought almost within a week's joursey, the two worlds the Eastern and Western Hemispheres. Now a trip to Ergland, and then peross the Straits of Doves or a few days sojourn to Parison to Haly to Rome to Naples - a view of Vesuvius, the Catacombe, and the ruing of the imperial City, and home-are all comprehended in a summer's pleasure travel. Thousands go to Europe now, where one went fifty years ago. We have become familiar with foreign countrieswith their people, their habits and peculiarities, which, fifty years ago, we heard be attempted if at all. of and knew of as only strange and singular tales. Nations all over the world are daily growing more and more familiar with each other.
